

ResourceHub Project

Presented by Phoenix Studio

The Student Struggle

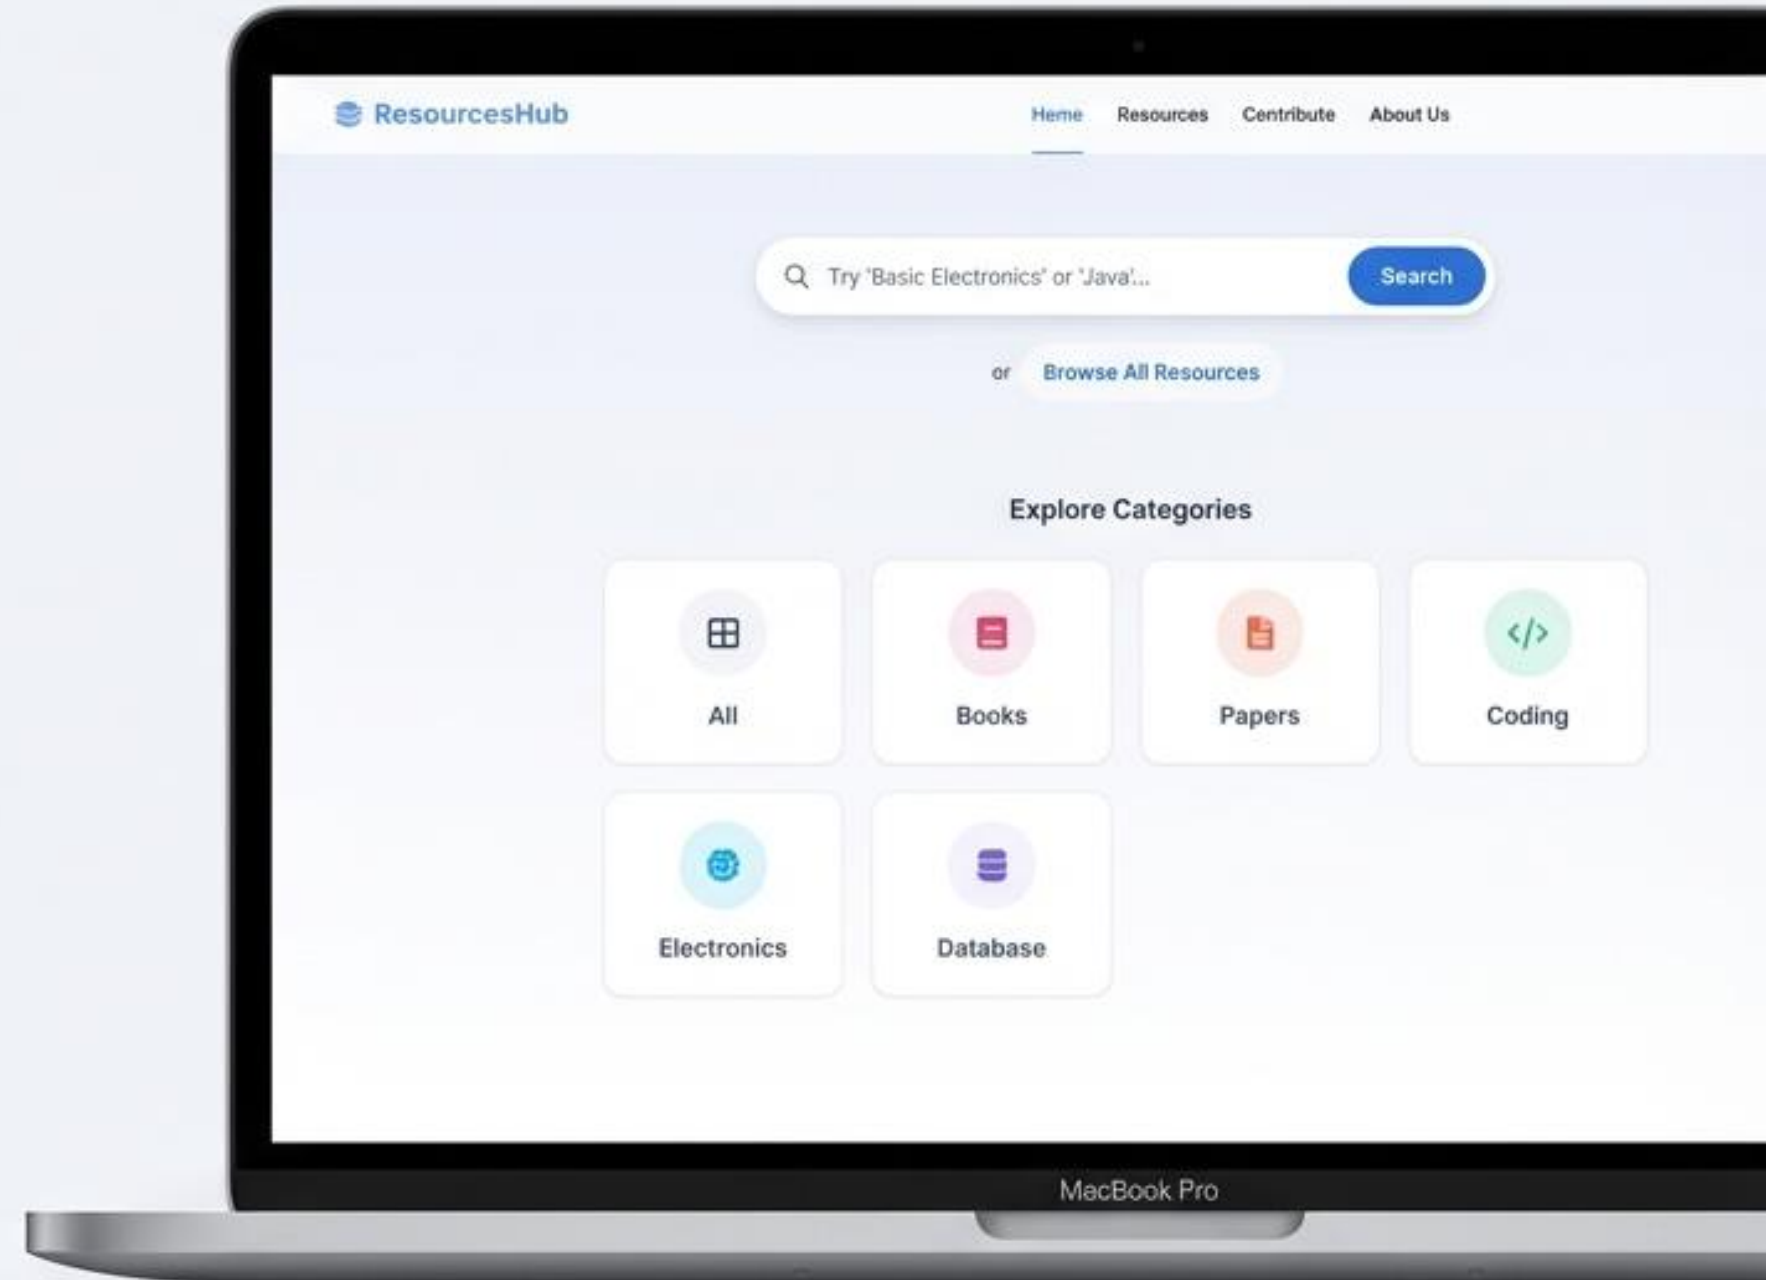

Many Computer Science students face significant difficulty finding quality study materials. The current ecosystem is fragmented, leading to confusion when searching for notes, books, question papers, code snippets, and advanced project samples.

Introducing One Platform. Total Clarity.

A modern, full-stack web application designed to centralize and manage study resources across devices.

1,200+ Resources

Available Instantly.

Objectives of ResourcesHub

Save Time

Streamlining the search for academic resources.

Easy Access

Providing notes and materials anywhere, anytime.

Advance Knowledge

Bridging the gap to advanced learning.

Design Philosophy & Performance

- **Responsive First:** Fluid layout adapting from 1280px desktops to 480px mobile screens.
- **Framework-Free:** Direct DOM manipulation for maximum control and speed.
- **Component-Based CSS:** A custom design system using CSS variables for consistency.

Technical Stack

Backend

Inter

Flask API Server

Lightweight, Python-based
backend for rapid API
development.

Database

Inter

PostgreSQL via Supabase

Relational database
management with integrated
storage.

Frontend

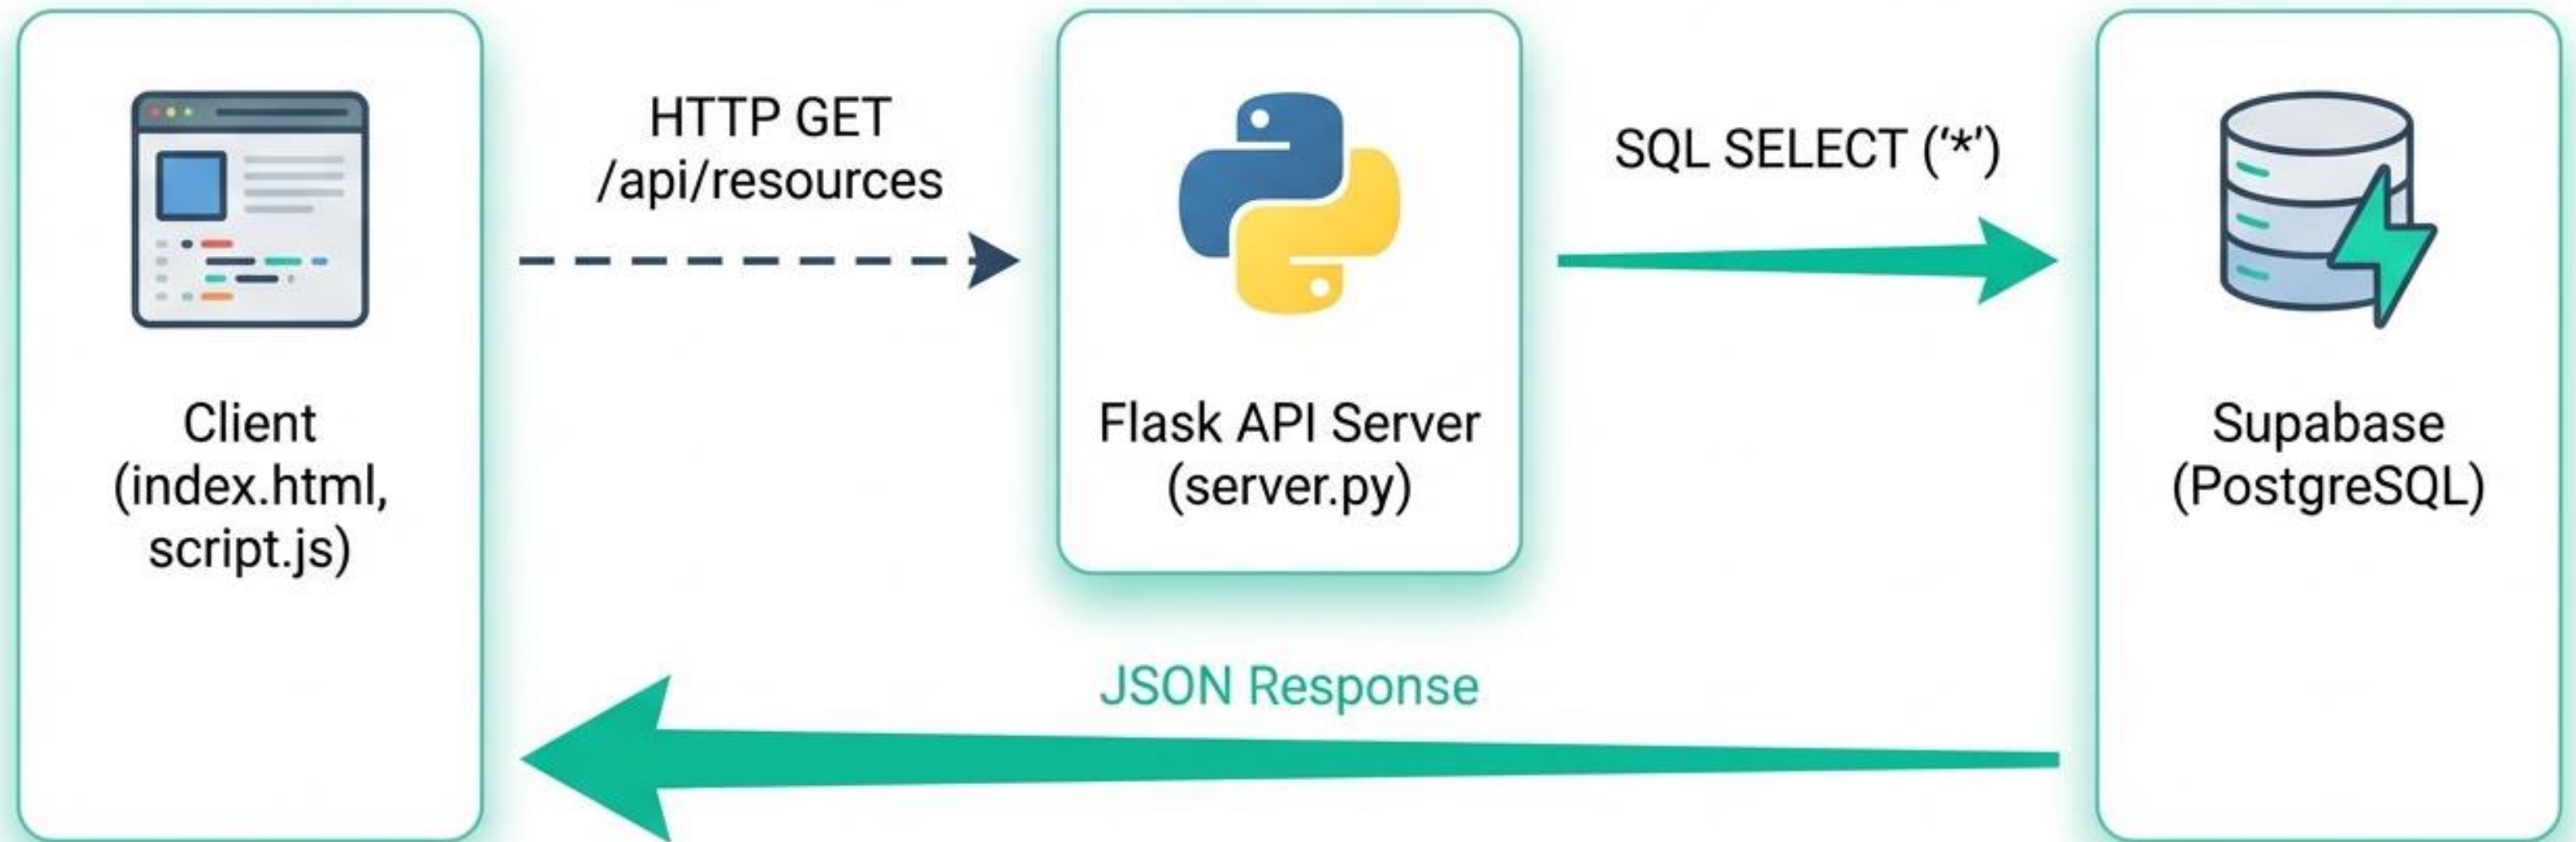

Inter

Standard Web Tech

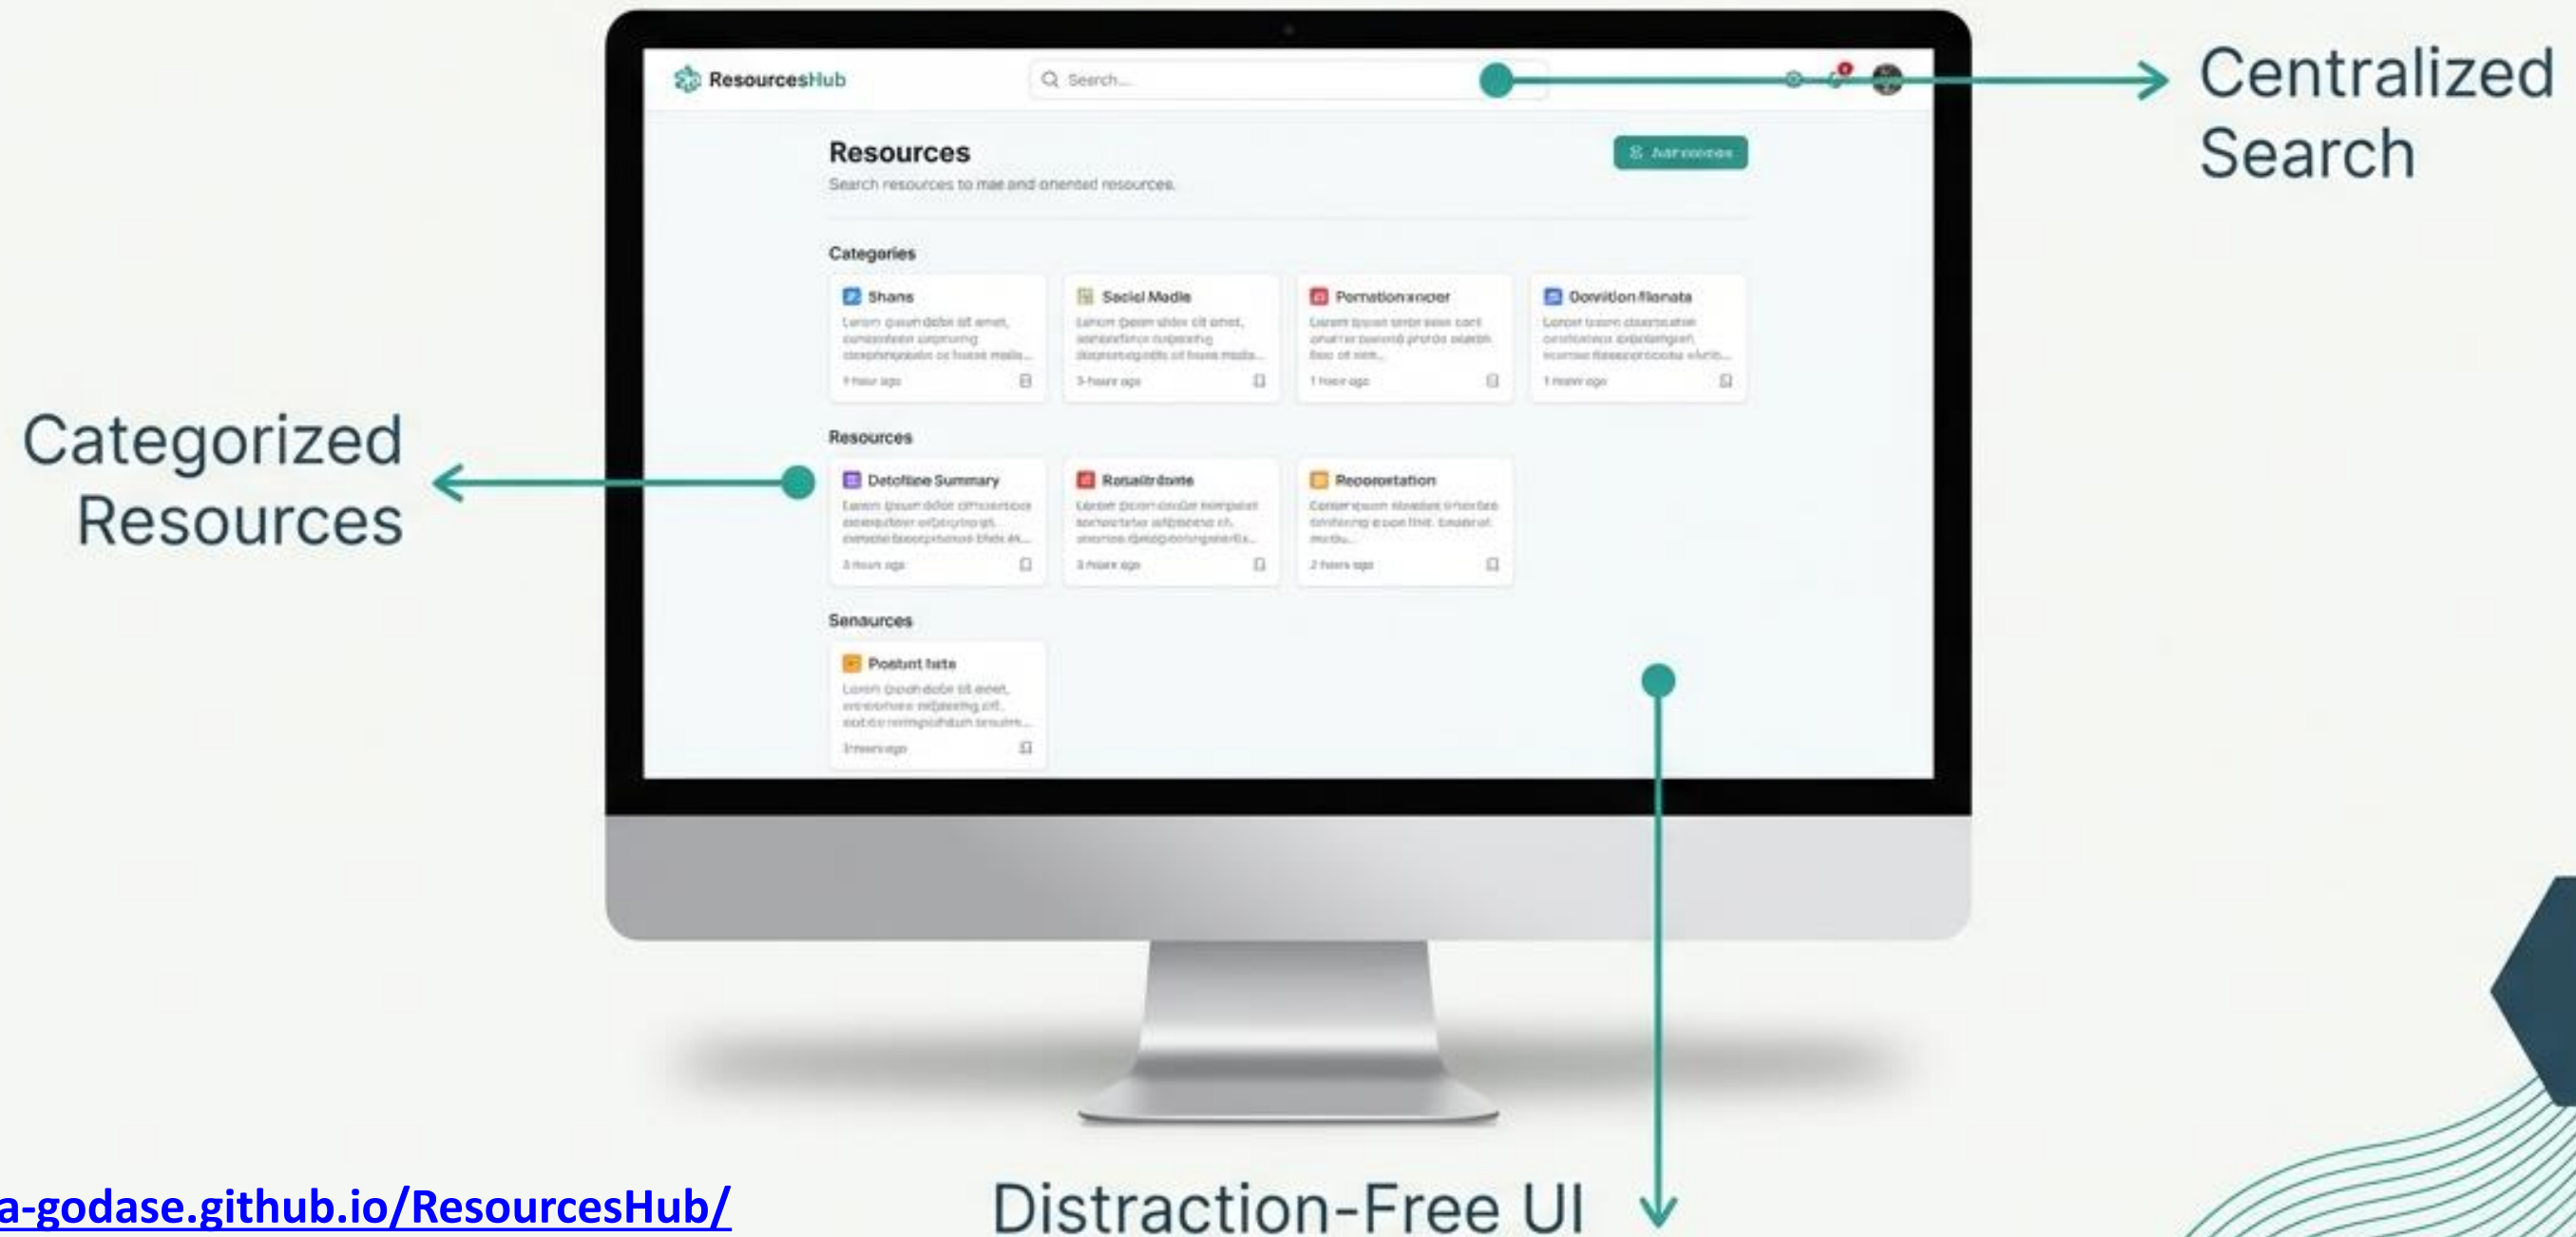

Component-based CSS and
framework-free JavaScript
for performance.

Full-Stack Application Architecture

Live Project Insights

Search & Explore Interface

Contribute & Climb

Students don't just consume; they contribute.

Future Scope & Roadmap

Expansion Strategy

Scaling ResourceHub to other academic disciplines.
